JavaScript Tips →

React is a **JS library** developed by **Facebook** which allows you to build **UI components**. It facilitates the creation of interactive User Interfaces.

VS ⟝————————————————⟞

Angular is a **structural framework** for developing **dynamic** web apps. It allows developers to use **HTML** as a template language and allows HTML's syntax to express the application's **components** briefly and clearly.

Features of ReactJS is **Code reusability**, Rich **JavaScript** library, **b**, One-way data-binding.

VS ├─────────────────────────┤

Features of Angular is **Testing**, **Templates**, **Accessibility**, **Low-code framework**.
It is easier to **grasp** compared Angular. However, it is **difficult** to **learn** when **augmented** with **Redux**.

VS ├────────────────────────────┤

Learning Angular is **not easy** for **beginners**. Thus, it requires lots of training.

JavaScript Tips →

React.js is **preferred** when the **dynamic** content **needed** is **intensive**.

VS ├───────────────────────────────┤

Angular is **platform-independent** and hence is **compatible** to work in any platform.
React.js **written** in **JavaScript**.

VS

Written in Microsoft's **Typescript language**, which is a superset of ECMAScript 6 (ES6).

React.js **Does not use the Dependency Injection concept.**

VS ├─────────────────────────────┤

Angular **Hierarchical Dependency Injection system** used.

Data binding is **one-way type**.

VS ├──────────────────────────────┤

Data binding is **two-way t**ypes.

JavaScript Tips

Companies using **React**: Instagram, Yahoo, Netflix, Asana, Facebook, Dropbox, Slack, Uber Technologies, Intercom, Airbnb, etc.

VS ├─────────────────────────────┤

Companies using **Angular**: Beam, Microsoft, Apple, GoPro, Mesh, Telegram, Google, WePay, PayPal, AWS, etc.
